

Nikita Bulava

Data Analyst · Junior Machine Learning Engineer

Petropavlovsk, Kazakhstan | nikitabulava@outlook.com | 8 705 650 84 03 | github.com/sadqma

PROFESSIONAL SUMMARY

Information Systems graduate specialising in data analysis and machine learning. Builds end-to-end pipelines — data collection, cleaning and feature engineering in Python (pandas, NumPy), SQL querying in PostgreSQL, model training and evaluation with scikit-learn, and results delivered through FastAPI services and interactive dashboards. Experienced with supervised classification (logistic regression, SVM), data visualisation, ETL and streaming with Apache Kafka, REST API development and Git version control. Strong analytical thinking, fast learner, comfortable with AI-assisted development workflows.

TECHNICAL SKILLS

Languages	Python, SQL, R
Data & Analytics	pandas, NumPy, Matplotlib, Jupyter Notebook, Microsoft Excel, Tableau, exploratory data analysis, data cleaning, feature engineering, descriptive statistics, data visualisation, dashboards, reporting
Machine Learning	scikit-learn, logistic regression, support vector machines (SVM), classification, model training & evaluation, cross-validation, precision / recall / F1, predictive modelling
Databases	PostgreSQL, SQL queries, joins, aggregation, schema design
Backend & Data Eng.	FastAPI, Node.js, REST API, Apache Kafka, ETL pipelines, data processing automation
Tools	Git, GitHub, PWA, AI-assisted development
Soft Skills	Analytical thinking, problem solving, attention to detail, teamwork, self-learning, English technical communication

PROJECTS

PASS — Predictive Academic Success System

github.com/sadqma/PASS_Project

- Built a machine learning model (logistic regression, scikit-learn) that predicts student academic outcomes from historical performance data.
- Prepared and cleaned the dataset in Python: missing-value handling, feature engineering, train/test split, accuracy and precision/recall evaluation.
- Served predictions through a FastAPI REST backend and a JavaScript dashboard that visualises results for non-technical users.

Spam Detection System — Diploma Project

- Designed an end-to-end text-classification pipeline: Node.js service, PostgreSQL storage and Apache Kafka for real-time message streaming.
- Implemented the Python ML module (logistic regression + SVM) with text preprocessing and vectorisation, comparing models by accuracy and F1-score.

Cost of Living Across Kazakhstan's Regions

github.com/sadqma/kazakhstan_regions_research

- Compared all 20 regions of Kazakhstan by how much of the median salary remains after mandatory costs (rent, food, utilities) and tested whether migration follows it.
- Wrote a krisha.kz scraper in Python (requests, BeautifulSoup) that collected ~32,000 sale and rental listings using area-band sampling and weighted medians; validated against official statistics (rank correlation 0.89).
- Processed Bureau of National Statistics data with pandas and presented findings in Matplotlib charts, an interactive Tableau Public dashboard and an analytical article.

EXPERIENCE

IT Intern · Pilon Construction Company, Petropavlovsk

2023 · 1 month

- Supported office IT operations and worked with company data records and spreadsheets.

Intern · Palace of Schoolchildren, Petropavlovsk

2022 · 1 month

- Assisted with computer-lab equipment and helped run IT activities for students.

EDUCATION

B.Sc., Information Systems in Management — M. Kozybayev North Kazakhstan University

2022–2026

University of Arizona — dual-degree program, USA

2022–2026

COURSES & LANGUAGES

Courses CS50x; Cisco Networking Basics; Academic Writing

Languages Russian — Native · English — B2 · Kazakh — A2
